Umsögn:

20-11-8

I am very happy to see a female present a progeny group. Only three animals presented but all very high quality. The type of the mother is evident. All progeny are excellent type within the standard size. Correct proportions and strong bones. All progeny have correct heads with dark eyes and good expression. Most stand correct in front. Very good anatomical qualities and all showing very good movement. It is clear that this mother has been a very valuable breeding female. I congratulate the breeder on a top quality group.

Excellent:
